

# Neutra•Sol™ X-Ray/Photo Processor Drain Cleaner

- Convenient, easy to use
- Specially formulated to dissolve calcium carbonate and iron deposits
- Safe for use with plastic and iron drain pipes
- Meets UN and D.O.T. standards as a non-corrosive substance
- Packaged: 11 x 16 Fl. oz.

Catalogue #3511

Chemical build-up in floor drains of film processing equipment is generally caused by calcium carbonate from developer overflow and from iron deposits from steel wool silver recovery. Dissolving these materials after solid build-up has occurred is a difficult task. The general consensus within the industry is that preventative measures should be taken to prevent or retard the inevitable build-up that is likely to occur. Liquid cleaners currently used for this purpose tend to be corrosive and dangerous to handle, or not very effective. Powdered cleaners tend to be messy and the dust from these powders can be inhaled, if proper preventative measures are not taken. Additionally, typical commercial household drain cleaners tend not to be effective at all, due to their alkaline formulation.

**Neutra•Sol™ Liquid Drain Cleaner** has been specifically formulated to attack calcium carbonate and iron deposits found in the typical, film/photo processor drain. Neutra•Sol™ Liquid Drain Cleaner is at the same time non-corrosive to steel.

**Neutra•Sol™ Liquid Drain Cleaner** formulated as a liquid for ease of use and handling – and used as recommended – is designed to assist in preventing excess build-up in processor floor drains, and is packaged in 16 fluid ounce bottles.

## Fotex Drain Cleaner

- Dissolves and removes chemical deposits that organic cleaners can't budge.
- Eliminates drain repair and replacement.
- Reduces costly downtime.
- Eliminates flooding and shock hazards due to drain back-up.

### Catalogue #3515

List Price: \$116.75

Fotex Drain Cleaner is especially compounded to react with and dissolve chemical residue deposits commonly found in photographic and x-ray processor drains.

Ordinary drain cleaners are designed to dissolve foreign matter accumulated in drain traps. This foreign matter must be organic in nature in order for most commercial drain cleaners to be effective. Ordinary drain cleaners will, therefore, not effectively remove chemical deposits. Chemical residue deposits found in processor drains gradually build up along the entire inside surface area of the drain pipe. Inevitably these deposits will completely restrict the flow of effluent through them, causing drain backup and resulting in

Catalogue #3515 36 packets per case

flooding conditions. When the drains reach this restricted condition, they must often be replaced or mechanically cleaned out, if possible.

Fotex Drain Cleaner will dissolve these deposits, but severely restricted drains may require initial mechanical cleaning. Fotex Drain Cleaner is an extremely efficient preventative maintenance product. Regular and consistent use will discourage the chemical deposits from accumulating within the drain system.

When initially using Fotex, it will be beneficial to use more than the recommended amount, more frequently, to help remove previously deposited material from the drain systems.

### Working Solution for Cleaning Radiological Equipment

Clear Image Radiographic Cleaner used for cleaning film processors, silver recovery units and chemical mixers and general darkroom uses.

- Cleans viewboxes
- Cleans fixer, developer and wash tanks
- Cleans fixer & developer spills
- Cleans roller systems
- Cleans the processor recirculation system

## Photobrome™ Lab Pak II

- May be used in manual tanks or directly in processor wash tanks.

Photobrome™ is a bromine-based sanitizer used for controlling microbiological growth in photo-processing wash waters. It may be added to your water supply line by means of a Photobrome™ Feeder, or, for convenience, place Lab Paks directly in the wash tank.

Catalogue #3509

**BROCHURE AVAILABLE**

Although Photobrome™ is not intended to remove existing biological growth, it significantly reduces algae buildup so that there is less to clean and cleaning does not need to take as long. It is important to clean the processor thoroughly prior to using Photobrome™.

Photobrome™ also reduces residual thiosulfate levels, thereby improving a film's archival quality.
