

New Hampshire Maple Syrup

Many of you know that for years we have been giving away small tins of maple syrup at the RSNA and other Trade Shows as a way of giving our customers a small taste of the region we come from.

Over the years these have become quite popular. So, in response to the many requests we received, we have begun carrying them in our inventory. It's fun to help provide our customers with a taste of something that is so uniquely New England.

The Maple Syrup Process

Maple syrup is made from the sap of maple trees. In early spring when the temperature is above 40 degrees during the day and below 32 degrees at night, the sap begins to run from the roots to the branches of the maple trees. Approximately 40 gallons of sap are boiled down to produce just 1 gallon of syrup. State Inspectors assist producers to maintain the highest quality product and service. Remember that all syrup should be kept in your refrigerator or freezer to assure the highest flavor retention.

DFP-450 Thermometer

This popular digital thermometer has been improved with several significant new features. Unit shuts itself off if not used for a period of 50 minutes, extending battery life. It features a dual purpose activate/update button. When pressed once and released, unit will turn on and update every 10 seconds. When button is pressed and held, unit will provide a continuous update of the read-out. For higher temperature applications, the DFP-450 has a service range of -40° to 450°F. The "flat head" case design makes pocket carrying convenient and prevents damage from rolling off counter tops.
